SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	Introduction: It may not be true that literatures that empirically relate inflation and economic growth is scanty; the authors should carry out wider literature review to unearth these works. A lot have been written about inflation vis-a-vis economic growth in Nigeria; with different theoretical and analytical frameworks. In recent times, a lot of such works rely heavy on dynamic modelling process as adopted by the author(s). Besides, inflation data and other macroeconomic variables are awash in different mandated statistical periodicals Literature Review: Good attempt but no mention of literature from similar economy like Nigeria. As I noted in the earlier comment, much have been written in Nigeria. I suppose the author(s) should have identified and review these works with a view to finding gaps (either theoretical or analytical) that this work intends to fill. Theoretical framework: I strongly suggest the author(s) have a look at the work of Javier Andres and Ignacio	We quite appreciate the reviewer for his criticisms on this paper. We wish to state here that all the corrections have been corrected as recommended by the reviewer. The word scanty mentioned in this work was used in the context of Nigeria, because no numerous quality works had been written so far. Among variables stochastic must exist therefore no variable can actually capture 100% outcome of the empirical.
