SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	This paper tries to 'assess' the relevance of Accounting with IT in small and medium scale enterprises (SME) in the African nation of Ghana. After revising the current weak methodologies available, it highlights the impact of IT on accounting and the firm's performance with work being done upon live-data collected from respondents of the concerned questions. The Pearsonian correlation method (Type-I) is applied for analysis. It is concluded that the usage of IT by a firm will apparently place it above its competitors in the field.	Thanks for the massive work done. The topic was well considered before coming up with the manuscript, however, one can also look at it in the view of the reviewer although it has different construct but same meaning.
<u>Minor</u> REVISION comments	The author should have mentioned in a more elaborated manner how he had applied the Pearsonian Correlation Model and which type was exactly used.	The issue is well considered and addressed.
<u>Optional/General</u> comments	NONE
