SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	English check is recommended	Remarks were taken into account - correction in the text are highlighted in yellow
<u>Minor</u> REVISION comments	In the line 376 reference is missing	Reference is given earlier in the line 370 ([42])
<u>Optional/General</u> comments	A really nice paper and important topic. Thorough study of related research. It would be recommendable to consider the possible weaknesses of using quantitative methods for predicting future. For example, nanomaterials are selected as one of the most important themes although it shows in the Table 4 decreasing trend in publications. This kind of debate could be added to the chapter Conclusions/Discussion.	We thank the reviewer for so warm reviews of our work, however we want to note that this article is summary in our research and the fair note of the reviewer of about "possible weaknesses of using quantitative methods for predicting future", and also other debatable issues explicitly are considered by us in [19] and in this article we decided to be restricted to the link to them.
