

**SDI FINAL EVALUATION FORM 1.1**

**PART 1:**

Journal Name:	<a href="#">British Journal of Education, Society &amp; Behavioural Science</a>
Manuscript Number:	2013_BJESBS_5177
Title of the Manuscript:	Learning Probability in the Arts Stream Classes: Do Colour Balls with STAD-Cooperative Learning help in Improving Students' Performance?

**PART 2:**

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>The author's argument is plausible. However, the clause should be included in the method of analysis that "there was no significant difference between the two pretest means therefore the post-test scores were compared using an independent t-test, in accordance with the recommendations of Gay &amp; Airasian, 2003,". I think this will suffice.</p> <p>It should be noted that the quoted text did not rule out the use of ANCOVA whether or not the conditions are met.</p> <p>However I think the paper is ok now.</p>
