

SDI Review Form 1.5

PART A:

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	MS: 2012/BJMCS/1598
Title of the Manuscript:	An iterative method for approximating the common solutions of nonexpansive semigroups, a system of variational inequalities ,variational inequalities and equilibrium problems.

(Note: Title of different sections as proposed below may differ in case of review paper)

SDI Review Form 1.5

PART B: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part and write here 'Corrected'/ if not agreed, give suitable justifications)
General comment:	The authors introduce and consider an general iterative method for finding a common element of the set of common fixed points of a one-parameter nonexpansive semigroup problem, a system of variational inequality problems, a variational inequality problem and the set of solutions of a suitable equilibrium problem in a real Hilbert space.	
Specific comments:	The proofs are seem correct.	
Title and abstract	Good	
Introduction (Is the problem/objective of this study original, important and well defined?)	Good	
Are all the references cited relevant, adequate? Are there any other suitable current references authors need to cite?		
Materials & methods (Kindly comment on the suitability of the methods. Sufficient details of the methods should be provided to allow peers to evaluate and/or replicate the work)	Good	
Results & discussion (Kindly comment on: 1. Are the data well controlled and robust? 2. Authors should provide relevant references during discussion. 3. Discussion and conclusions should be based on actual facts and figures. Biased claims should be pointed out. 4. Are statistical analyses must for this paper? If yes, have sufficient and appropriate statistical analyses been carried out?)	Please check some typos error and misprints.	
Are there any ethical or competing interest issues?		
Conclusion (Is the conclusion supported by the data, discussed inside the manuscript? Conclusions should not be biased and should be based on the data, presented inside the manuscript only)	good
