

SDI Review Form 1.6

PART 1:

Journal Name:	<u>British Journal of Mathematics & Computer Science</u>
Manuscript Number:	2013_BJMCS_5252
Title of the Manuscript:	Transform of various Random Noises in sequences of proved random numbers
Type of the Article	Research Paper

General guideline for Peer Review process is available in this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

- This form has total 7 parts. Kindly note that you should use all the parts of this review form.

SDI Review Form 1.6

PART 2: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The subject of this paper is interesting; however it is hard to be accepted in current form. The main problems are as follows: 1. Main goal of the paper is not clear for either a new result or an expanding application; 2. Basic assumptions and conditions seem heavily relevant to previous papers [4-13]; 3. Different symbols are freely used from each source with slight different meaning, such as $a a', m m', n n', T T' \dots y_i y'_i \dots N N^* \dots$ without any indication on their differences ... 4. Logic structure of whole construction is not clear, mixed previous results & new proofs ... 5. To show the proposed mechanism on randomness characteristics, it is more useful to include a list of various transformed random noise sequences as maps for illustration	
Minor REVISION comments		

SDI Review Form 1.6

<u>Optional/General</u> comments	It is necessary for author to identify the main target and also description strategy to reorganize this paper.
