

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	2013_BJMCS_6691
Title of the Manuscript:	A Nonlocal Boundary Value mixed Problem for second-order hyperbolic-parabolic equations in nonclassical function spaces

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1) As I mentioned in my previous report, the authors have used in their computations a non weighted integral condition, but in the position of the problem they have a weighted integral condition. 2) There is an extra boundary condition as I also mentioned in my previous report. 3) While obtaining the a priori estimate(3.1), authors have made conditions on the constants α_i , $i=1,2,3,4,5$ (page 8, lines 6 and 7 from the bottom). This should not be done, otherwise we can obtain hundreds of a priori estimates. For the solvability of the problem, I have the following crucial remarks: A) There is a missing integral term in (4.1) B) Conditions on ϵ_i , $i=1,2,3,4,5,6,7,8$ might ne not fulfilled. A) Inequality (4.25) does not imply that $w=0$. Hence the solvability of the problem is not established.	, $i=1,2,3,4,5,6,7,8$ might ne not fulfilled. C) Inequality (4.25) does not imply that $w=0$. Hence the solvability of the problem is not established.
