

SDI Review Form 1.6

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	2014_BJMCS_10027
Title of the Manuscript:	TRACE -BASED MODEL FOR KNOWLEDGE ACQUISITION SYSTEM
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Compulsory REVISION comments	From my point of view, yes. Authors seem not familiar with the basic research methodology. I am a researcher published over 20 international journal papers and from my point of view the quality of this paper does not even reach the level of an average conference paper. In the conclusion section, authors mentioned a software called WEKA without any reference. If the system is written by the authors, they should at least mention it somewhere in the text. If the system is NOT written by the authors, authors should not talk about it in the conclusion section and should provide a proper reference. Many figures and table are copied from other unrelated paper. Ex: Figure 3 is copied from presentation slides and the focus of that presentation has no relationship with this study. Authors use the term “context-aware” with a totally different meaning from this research community. There are many tools we can use to describe the architecture of a system, e.g. UML, ANSI flowchart. Authors should use these tools to redraw Figure 2. Authors claim their work can be utilized in firms, societies or even in individuals' life events without providing any concrete evident. The section 2 is organized as same as one of the referenced paper. But this section “Methodology” should	>> More details about WEKA you kind find in Training subsection (3.2). >> The application of the proposed model is in process for the case study presented in the Abstract which is almost finished and the primary results appeared confirming the proposed model utilization.

SDI Review Form 1.6

	be something new rather than dumping copied sentences and figures. The English should be reviewed by a native speaker. There are too many grammar errors and some sentences even do not have subject.	>> In Methodology section, there is citation from other studies and researches as per the data obtained from questionnaires and researches but we via this paper and research have developed the utilization of these data in order to improve old models such Case Based Reasoning and in valuing knowledge in a firm or in an organization, by transferring the intangible factors that are needed to valuate knowledge in an organization into numbers, in order to help understanding how an organization's knowledge adds value to its operations and thus enabling informed management of its knowledge assets.
<u>Minor</u> REVISION comments	Many sentences are copied from other literatures without proper citation. For example, at line 156 and 157, these sentences are word-by-word copied from other's paper. Authors should, at least, place the sentences in double-quote. But this kind of thing should not happen in a journal paper. Many unrelated texts, figures, tables are copied from others work.	
<u>Optional/General</u> comments
