

SDI Review Form 1.6

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	2014_BJMCS_13537
Title of the Manuscript:	The Possible Structure in the Distribution of Decimals in the Euler's Number Expansion
Type of the Article	Regular

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	This paper discusses randomness of the Euler's number e digits in decimal expansion, and explores the fixed-effects and random-effects Poisson panel-data models, which reveal the presence of some structure in the distribution of e decimals. These results are correct and interesting and the methods presented in this paper are skilful. Meanwhile, the English writing are well done. In view of the above, I strongly recommend that this paper should be accepted for publication in British Journal of Mathematics & Computer Science.	Thank you very much for taking the time to read the paper and for your review.
