

SDI Review Form 1.6

Journal Name:	British Journal of Mathematics & Computer Science
Manuscript Number:	2013_BJMCS_8835
Title of the Manuscript:	Algorithms for Solving Doubly Bordered Tridiagonal Linear Systems
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	In paragraph, ABSTRACT, the author should correct the statement "The current paper focus" to "The current paper focuses " Author(s) should also note that keywords are before subject classification according BJMCS Template. There is no conclusion in this article. This should briefly state the major findings of the study. It is advisable that they should be explained point wise.. It would be better if the authors can further improve the technical presentation of the article.	We agree with the reviewer. Done.
<u>Optional/General</u> comments	I have gone through this article. The authors have really done well. The introduction section is good and shows the importance of the study and provides a factual background, clearly defined problem, proposed solution, a brief literature survey and the scope and justification of the work done. The part I found most interesting is the presentation of thought which demonstrates the importance of the research. In my opinion, the paper is easy to understand and well written. This article focuses on solving doubly bordered

	tridiagonal linear systems of equations via transformation. It investigates numeric and symbolic algorithms for solving such systems. MAPLE was used to simulate the problem considered. I highly recommend the research article for publication in this reputable and valuable (BJMCS) journal after minor revision and correction.
