SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	**British Journal of Mathematics & Computer Science**
Manuscript Number:	**2013_BJMCS_8110**
Title of the Manuscript:	**The Roles of Condition Number in Least Squares Equation**

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	**Authors' response to final evaluator's comments**
This manuscript has been improved in the current state. However, the abstract is too long to indicate the concerns of the paper. After the following minor comments have been revised, this paper can be accepted.	The abstract slightly reduced as suggested.
1. In my personal opinion, equation (1.2) is suggested to revise as : $T^T T\beta = T^T Y \Rightarrow \hat{\beta} = \left(T^T T\right)^{-1} T^T Y = T^+ Y$ **, where** $T^+ = \left(T^T T\right)^{-1} T^T$ **is the pseudo inverse operator shown below (1.3).**	This has been corrected and in addition, the symbol for transpose ''T'' has been maintained throughout the paper.
2. The format of reference [5] should be revised.
