

Author's Feedback against Editorial Comment:

Here are my comments:

1. The author should write the family name for in text citation (Please check the introduction part)

I attached the last published paper for me in the journal of mathematical imaging and vision (Springer journal with 1.7 impact factor). I will escape commenting on this point since it is offensive, and he might see the attached paper to decide whether the editorial board accepted that paper in that journal.

2. Please use the standard format to write the references. (Please check the list of references)

This is the first time for us to receive this request from a journal. As, we usually notice that the journal production team take care about that. However, after the final acceptance of the paper we will try to spend some time on that if the journal doesn't have a production team or this is the policy of the journal.

3. The following sentence is not clear: "The samples' value, which define and form the behavior and the pattern of the audio basically are data (?), which are defined by specific value per sample."

We modified it to look better.

4. I think you must write this sentence "In order to judge the modeling" as "In order to validate the model"

We modified it.

5. I think you must write this sentence "This value will help us to judge whether" as "This value can be used to identify whether". Please check the rest of your paper.

We modified it.

GENERAL NOTE:

If there are specific sentences that you want it to be modified, you can inform us specifically about them. The paper is reviewed in a professional writing center, so we don't see any problems in the sentences.

6. The author should revise and rewrite this paper again. His writing skill needs to be improved in order to get this paper published.

This criticism about my writing skills is not in its place here, it should be directed to the center!

Note: Modification was done in this document ONLY to hide some comments, which are against the SDI peer review guidelines.
