

SDI FINAL EVALUATION FORM 1.1

PART 1:

|                          |                                                                                                             |
|--------------------------|-------------------------------------------------------------------------------------------------------------|
| Journal Name:            | British Journal of Mathematics & Computer Science                                                           |
| Manuscript Number:       | 2014_BJMCS_10710                                                                                            |
| Title of the Manuscript: | 2-tuple prioritized aggregation operators and their application to multiple attribute group decision making |

PART 2:

| FINAL EVALUATOR'S comments on revised paper (if any)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Authors' response to final evaluator's comments |

| <p>The paper is much better and can be accepted now. However, to make it more valuable and help improve the reputation of this journal, it is advised to add some state of the art articles about aggregation operators or group decision making. The author did not cite the following papers, although he/she claimed been revised:</p> <p>[1] Some new hybrid weighted aggregation operators under hesitant fuzzy multi-criteria decision making environment, Journal of Intelligent &amp; Fuzzy Systems (2014) <a href="http://dx.doi.org/10.3233/IFS-130841">http://dx.doi.org/10.3233/IFS-130841</a>.</p> <p>[2] Multiplicative consistency of hesitant fuzzy preference relation and its application in group decision making, International Journal of Information Technology &amp; Decision Making, vol. 13, no. 1, pp. 47-76, 2014.</p> <p>[3] Distance and similarity measures for hesitant fuzzy linguistic term sets and their application in multi-criteria decision making, Information Sciences (2014) 271 (2014) 125-142.</p> <p>[4] Automatic procedures for group decision making with intuitionistic fuzzy preference relations, Journal of Intelligent &amp; Fuzzy Systems (2014) DOI:10.3233/IFS-141203.</p> <p>[5] Intuitionistic Fuzzy Analytic Hierarchy Process, IEEE Transactions on Fuzzy Systems (2014) doi: 10.1109/TFUZZ.2013.2272585.</p> <p>[6] Priorities of intuitionistic fuzzy preference relation based on multiplicative consistency, IEEE Transactions on Fuzzy Systems (2014) doi: 10.1109/TFUZZ.2014.2302495.</p> |                                                 |
