

SDI Review Form 1.6

Journal Name:	<u>British Journal of Mathematics & Computer Science</u>
Manuscript Number:	Ms_BJMCS_19543
Title of the Manuscript:	A Method for Human Emotion Recognition System
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	1. Why are images converted to gray scale from RGB in the preprocessing? Especially mouths of most people are red while eyes and noses are not. 2. 40000 features for each sample? Too many features for so little dataset. Especially for linear classification feature selection or reduction can be done first. 3. For multi-class, confusion matrix is more helpful to test the performance of classifier.	1. For any image processing problem images are converted into gray scale for ease of processing. 2. Database are large as mentioned in reference [8]. The suggestion is included 3. We are not convinced
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
