

**SDI Review Form 1.6**

Journal Name:	<a href="#">British Journal of Medicine and Medical Research</a>
Manuscript Number:	2013_BJMMR_6088
Title of the Manuscript:	<b>Doxorubicin Cardiotoxicity in Acute Lymphoblastic Leukemia: Possible Protective Role of Grape Seed Extract Proanthocyanidins</b>
Type of the Article	<b>Research article</b>

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

**SDI Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b><u>Compulsory</u></b> REVISION comments		
<b><u>Minor</u></b> REVISION comments	<p>The author should mention the p value of</p> <ol style="list-style-type: none"> <li>Percent decline between phase I and phase II in both EF &amp; FS amongst the two group.</li> <li>Similarly the p value of percent change between phase I and phase II in Vitamin C and MDA among the studied group.</li> </ol>	<p>The <i>P</i> values of percent decline &amp; percent change between phase I and phase II for each of EF, FS, vitamin C and MDA among the studied groups were 0.5, 0.8, 0.4, 0.1 respectively. This can't deny our conclusion that "GSE can ameliorate DOX-induced cardiotoxicity" as evidenced by statistically significant difference in mean values of both groups. In addition, higher percent change in group I than group II indicate clinical significance of modified treatment regimen. However we added your valuable comment (p value) in results and figures 1 &amp; 3.</p>
<b><u>Optional/General</u></b> comments
