Subject: Σχέτ: Request for final decision for manuscript number 2014/BJMMR/11175

please receive my comments on manuscript number 2014/BJMMR/11175

Comments

This is an interesting paper and I consider it deserves to be published after a few modifications. These are my comments:

1. It is not common practice to use references in the abstract, since the readers of the abstract (i.e. a reader searching in the Pubmed) will not have the opportunity to see the references but only numbers in the abstract. Omitting the references in the abstract means that the order of the references in the manuscript (main text) should be changed accordingly (ref no 4 should become ref no 1)
2. If any figures used in the manuscript come from another source, this should be clearly stated and the authors should have the permissions for using the material (e.g figure 1, figure 2, etc). If the material is of free access without need for permissions, then probably the specific URL should be provided.
3. The authors should provide references for any statement or evidence-based knowledge they write or present in the paper.
 - For example:
 - the authors write: "Such mutations are responsible for over 6000 humanmorbidity and mortality." : they should provide the relative references.
 - The authors write: "Nevertheless, the recent national research fund of £3.1 millionthis field holds.": the authors should provide the relative reference/source of this information.
 - line 200, the authors write: "The Human Genome Project,, even in a draft form, and cost nearly \$3 billion.": once again the relevant reference should be added.
3. line 176, the authors write: "One of the most significant clinical impacts of GWAS have been their contribution...": single number should be used (one of the most...has been)

Editor's Details:

Chryssoula Staikou

Medical School, National & Kapodistrian University of Athens, Greece

AND

1st Department of Anaesthesia, Aretaieio Hospital, Athens, Greece
