**SDI Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b><u>Compulsory</u></b> REVISION comments	<b>Very well written manuscript with interesting results. The methods are very detailed and clear as well as the results. The discussion is adequate with previous studies. The paper should be accepted with some minor reviews.</b>	
<b><u>Minor</u></b> REVISION comments	Some points must be addressed: Line 38: it is necessary to put the reference for the following affirmation: "Chronic stress exposure is associated with neurodegeneration and a marked change in anti-oxidant enzyme". The paragraph from line 210 to 215 is a little confusing. I suggest to explain more about the study cited, for example, how long time before the stress the rats received paroxetine? And to be a little less enthusiastic about the comments, for example, in the this part "These results provide a strong evidence of antidepressant effect of paroxetine as already well-know ", exclude the term "strong". Line 247: paroxetine is with two "ps", please correct it.	
<b><u>Optional/General</u></b> comments
