

Editorial comments:

Overall. Well presented and designed study.

Some queries.

Dinamic should be dynamic

Grammar needs a little refining

Weaknesses.

Blinding of examiner? Please discuss

No pharmacologically dilated data. It would interesting to clinicians to document the extreme end of the spectrum in difference, which we experience in dealing with these patients. Especially in the context of cataract surgery which the authors mention. Please discuss.

Author's feedback:

Dinamic was corrected as dynamic.

We show maximum attention to correct grammatical errors.

Blinding of examiner? We added the phrase "...by the same examiner without knowing their study groups" in order to clarify our explanation

Since we do not have the results of pharmacologically dilated data, we could not share these. We are planning to take into consideration these results with another study.
