

Editor's Comment:

One of the 3 reviewers (Codename PIE) appears to have concerns about the quality of the English in this manuscript, and has rejected an earlier version on these grounds. Therefor I recommend that manuscript number 2015_BJMMR_21384_v2 (version 2) be sent to Reviewer PIE for re-evaluation with the stipulation that the Reviewer should be more specific about the changes recommended to improve the quality of the language.
