

**SDI FINAL EVALUATION FORM 1.1**

**PART 1:**

|                          |                                                                                                                                     |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Journal Name:            | <a href="#">British Journal of Medicine and Medical Research</a>                                                                    |
| Manuscript Number:       | 2015_BJMMR_16224                                                                                                                    |
| Title of the Manuscript: | Toxicity of Sodium arsenite and Cyclophosphamide in Rats: Protective Effects of Aqueous Extract of Adansonia digitata L Fruit Pulp. |
| Type of the Article      | Original Research Article                                                                                                           |

**PART 2:**

| FINAL EVALUATOR'S comments on revised paper (if any)                                                                                                                                                                                                                                                                                                                                                                                                               | Authors' response to final evaluator's comments                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The principal remark highlighted in previous evaluation was not added to revised form. In particular is related to the addition of supposed active components responsible of biological activity, or at least, a partial characterization.</p> <p>The requested changes and additions are not present in revised version. In my opinion, a paper with only an extract administered to rats without a short characterization, lack of scientific importance.</p> | <p>Work is ongoing for full characterization of the active components. This preliminary study provides the basis for further studies on the extract and also gave some scientific insight into the medicinal uses of the plant.</p> |
