SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	It is a well prepared and very interesting detailed paper on the pathologic anatomy of Majewski syndrome. We encourage the authors to verify if there are other reports than the 100 published by Castriota-Scanderberg in 2006.	After extensive search regarding the frequency of occurrence of Majewski syndrome, we could only come across this book reference which states that less than 100 cases have been published so far. Also, the case report published by M. Pramila Padmini et al in 2009(Reference no. 6) mentions the same reference on the number of cases reported.
<u>Minor</u> REVISION comments	We recommend the authors to check the authorized bibliography on the Majewski Syndrome.	The bibliography is authorized to the best of our knowledge. Some additions have been made in the case discussion from authentic books (Reference no. 7,9)
<u>Optional/General</u> comments	It seems that there is a correction to be made in Table 1 – There are reported cases of Majewsky Sindrome with situs inversus abdominalis.	Reference no. 4, which is a book titled “Atlas of genetic diagnosis and counselling” by Dr. Harold Chen, lays down the criteria for diagnosing Majewski syndrome. In which, there is no mention of situs inversus abdominalis in type 2 SRPS, although it is occasionally seen in type 3. But rare cases with overlapping features can always be present. The table has also been revised.
