

Reviewer's comments:

Please find my peer review comments, which are all indicated in red.

Please find the original article entitled: **Bone marrow histopathology of differential diagnostic significance in JAK2 mutated versus MPL and CALR mutated essential thrombocythemia and myelofibrosis** to the Review Manuscript BJMMR-17689 to demonstrate typical bone marrow feature in JAK2V617 mutated MPN versus MPL mutated ET and CALR mutated ET and MF according to the WHO-CMP classification of the MPN anno 2015.

The papers State of The art Review is c is far superior to the short Editorial on the same topic and complementary to the extended overview.

The ECP criteria are used as minor criteria in the 2008 WHO classification of the MPNs.

Please find the manuscript in 2008 entitled: **The 2008 World Health Organization and European clinical, molecular and pathobiological (2008 WHO-ECMP) diagnostic criteria for the classification of myeloproliferative disorders or neoplasms (MPD/MPN): therapeutic implications for thrombocythemia, polycythemia and myelofibrosis patients** by Jan Jacques Michiels and Hendrik De Raeve.
