SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	Important issue, few publications in the area, discussed clearly and objectively. The image data could be improved, especially the graphics that do not follow the same pattern compromising the quality of data presentation. I suggest that they are improved in the layout aspect. The discussion and conclusions are very interesting. The reality of Nigeria seems to be able to dialogue with other world realities Ethical issues:- Yes, in the first paragraph of methodology citation:" Following approval from the local hospital ethical committee and informed consent from the patients, the study was Conducted in the clinical setting of the University of Calabar Teaching "	
<u>Minor</u> REVISION comments	Papers and research in surgical area are insufficient. We need to deepen the issues related to this topic. In this paper, the introduction of the work can be summarized to focus more on the survey data. I suggest that they are improved in the layout aspect.	

SDI Review Form 1.6

<u>Optional/General</u> comments	Paper appropriate and interesting to be published as a way to discuss postoperative, nausea, vomiting, anaesthesia and the other factors involved.
