

**SDI FINAL EVALUATION FORM 1.1**

**PART 1:**

Journal Name:	<a href="#">British Journal of Medicine and Medical Research</a>
Manuscript Number:	2015_BJMMR_17374
Title of the Manuscript:	The Effects of a Delay Following Warm-up on the Heart Rate Response to Sudden Strenuous Exercise
Type of Article:	Original Research Article

**PART 2:**

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The multivariate regression model is a statistical method able to evaluate the role of confounding factors on finale results. The authors should consider how the variables related to the characteristics of the patients can influence the final results. This is the meaning of the "multivariate regression model".	

**Reviewer Details:**
