

**SDI FINAL EVALUATION FORM 1.1**

**PART 1:**

Journal Name:	<a href="#">British Journal of Medicine and Medical Research</a>
Manuscript Number:	2014_BJMMR_15959
Title of the Manuscript:	Epidemiology of Coccidian Parasites in HIV Patients of Northern Uganda
Type of Article:	Original Research Article

**PART 2:**

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
This MS was corrected by the authors and much improved; however, it is still not acceptable for publication. Please see my comments on revised Word included in this email. Furthermore, the authors state that other intestinal parasites besides coccidia were found and identified. It would be a welcome addition to this MS, unless the authors are considering a second MS to report such findings. I personally advise to include those results in the text and even in a separate Table as incidental findings since it may add useful information on other intestinal parasites in that area of Uganda. As is, such data are, in general, difficult to obtain sometimes.
