

**SDI Review Form 1.6**

**PART 1:**

Journal Name:	<b>MS: 2012 BJPR 2172</b>
Manuscript Number:	<a href="#">British Journal of Pharmaceutical Research</a>
Title of the Manuscript:	<b>Combined oral arginine and monosodium glutamate exposure induces adverse response on the prostate and testis of rats.</b>

**General guideline for Peer Review process is available in this link:**

- This form has total 9 parts. Kindly note that you should use all the parts of this review form.

**SDI Review Form 1.6**

**PART 2: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b><u>Compulsory</u></b> REVISION comments		
<b><u>Minor</u></b> REVISION comments	Pag. 2. Parag. 1. Lines 2 and 10: write L-arginine instead of I-arginine.	
<b><u>Optional/General</u></b> comments	In this study the authors investigated the potential effect of L-arginine, glutamate and monosodium glutamate alone or combined for 4 consecutive weeks on the functional capacity of the prostate and testis of rats. Their results indicate adverse effect on the prostate and the testis of the rats when substances are combined, this seen by mean of changes in prostatic acid phosphatase activity and histomorphological studies in the testis. Caution is suggested in the simultaneous ingestion of arginine and monosodium glutamate in animals.
