Subject: Re: Request for final decision for manuscript number 2013 BMRJ 3513

The Manuscript 2013/BMRJ3313 (Parasitological evaluation of domestic water sources in a rural community in Migeria) was revised by two referees. The first one reject the MS and the second made many considerations asking for major changes in the MS. The authors have agree with the suggestions and sent a revised MS which was accepted by the referee. In my opinion the MS is a survey and not exactly an important piece of research. However it show the bad conditions of water in some rural areas of Nigeria and may act as an alert for the country and other countries in similar situations. So, my opinion is that the MS if publishe may be useful to show the critical conditions in the region perhaps providing further measures to improve water conditions in parts of Nigeria .In this way the MS deserves publication
