

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	MS: 2012/BMRJ/2896
Title of the Manuscript:	Biodiversity and enterotoxigenic potential of staphylococci isolated from raw and spontaneously fermented camel milk.

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. still number of samples in table 2 is not corrected 2. The authors said that accession numbers of genes sequenced in this study are reported in reference (22) (The GenBank accession numbers of the staphylococcal <i>rpoB</i> sequences reported in this study are as outlined by Drancourt and Raoult (22).) This reference was published in 2002 and used ATCC and CIP strains which were not collected from camel milk (Drancourt M, Raoult, D. Rpo B gene sequence-based identification of <i>Staphylococcus</i> species. J Clin Microbiol. 2002;40:1333-1338.), while the samples of this study were collected in 2007 and 2008 as mentioned in Materials and Methods (Total of 59 samples of raw, fermenting or fully fermented camel milk were collected from Kenya (in Isiolo, Nanyuki, Mandera and Garissa) and Somalia (in Burco and Garowe) in July and August year 2007 and May of year 2008.) No explanation for this?
