

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	2013_BMRJ_8004
Title of the Manuscript:	Physical and chemical aspects of Yarrowia lipolytica lipase immobilization by adsorption

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The Manuscript has been improved by additional experiment (namely, Determination of triglycerides (TAG) species, given in Section 2.2.6.) and the discussion has been widen (Section 3.6.). The Manuscript is now read smoothly, although some minor changes are still required. The list of some specific points is: 1. In Line 53, change "<i>its</i>" into "<i>their</i>". 2. Please make changes in lines 26, 178 and 197. 3. The authors need to be consistent in writing capital letters for Celite (or celite) and for Avicel (or acivel) throughout the Manuscript. 4. Make correction in Table 2, as suggested 5. The authors still need to clarify and correct the statements given in lines 158-162 (highlighted in yellow) since this is remained fuzzily. I hope I helped, in some way, in improving the Manuscript prior to its publication	1. We are corrected line 55 2. In abstract we are corrected line 26 line 180 and 199 3. We have corrected in all the manuscript (Avicel ,Celite and Silica gel) 4. Table 2 silice was replaced by Silica gel 5. We are corrected line 160-162
