

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	2013_BMRJ_8507
Title of the Manuscript:	Emerging third generation cephalosporin resistance and single RAPD primer for typing clinical Salmonella isolates from Lagos, Nigeria

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors have made most of the changes and corrections suggested. The article has been evidently improved. It is now clearer and state much better the results and importance of the investigation. However, there are some weak points that we modestly would recommend to re-check: i) The study design does not appear correctly stated in abstract or materials and methods. The authors refer only to information about patients and samples and the design or type of study is much more than that. Probably is better no to describe the study design. ii) No change in any of the tables or figures as suggested, were done. Most of the suggestions were addressed to ameliorate the comprehension and order of the info. Although the authors would consider that is not necessary to make some corrections in the tables, errors in scientific names, words and legends must be done, in our opinion. iii) A final reading to find double points, or parentheses (e.g lines 68, 69, 75...)is recommendable. iv) The figures must be improved. No changes were made at all and they are necessary. Fig 1 can be corrected as suggested; the suggestions for Fig 1 are possible to follow up. Fig 2 has a very low definition.	i. The study design addressed now changed to Study subjects which of course more appropriate as pointed out. ii. Correction in the scientific names of Salmonella as against the abbreviation used in the table1 had been made. , Words and legend s in the table further proof read and modified. iii. The final reading to remove double points and brackets in lines 68, 69, 70 75 etc now done. iv. The figures provided now a beat clearer than before as a necessity. That is how clear the picture can be.
