

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	2013_BMRJ_7851
Title of the Manuscript:	Molecular Characterization of hepatitis B virus circulating in asymptomatic and symptomatic carrier in Côte d'Ivoire

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
There are again some spacing and English grammar errors in the whole manuscript, the most of which I commented also in the previous versions. Authors should check and correct them possibly with the help of an English mother tongue. In particular, authors should check for the following inaccuracies: - In the "Conclusion" section of the Abstract, "HVB" should be substituted with "HBV" and the word "non-typeable" (also reported in the "Results" and "Conclusions" sections of the article) with the more appropriate "non-genotypable". - Lines 8-9 of the "Introduction" section, all the "with" prepositions should be substituted with "of". - In the "Materials and Methods" section: line 1, the word "across-sectional" should be substituted with "cross-sectional"; line 3, "HVB" should be substituted with "HBV"; page 4, line 1, the word "serums" should be substituted with "sera"; page 4, lines 6-7, again, I do not understand what authors mean with the word "thirst". Probably they mean "third". Moreover, there is a punctuation mistake between the two reported sentences. Furthermore, as I previously suggested, authors should explain and include in the manuscript, as they have done in the last author's feedback I received, the reason why they didn't investigate on genotype G-J in their cohort of patients. - In the "Results" section: lines 2-4 the sentences reported are grammatically incorrect and incomprehensible; line 8, the word "dominant" should be substituted with the more appropriate "prevalent" (also in the "Discussion" section); line 10, there is an English grammar error at the end of the sentence; lines 15-19, page 6, again, the word "Khi2" should be written in the English caption, i.e. "Chi-squared". Moreover, there are some punctuation and grammar mistakes; line 3, page 10, again, "was" should be eliminated; line 11, page 10, again, the word "previously" should be substituted with "previous"; line 19, page 10, again, "deases" should be substituted with "disease". - There are some grammar mistakes also in the figure descriptions that authors should correct. Finally, I highly recommend the authors to carefully reread the manuscript before resubmit it again, considering the above comments and avoiding possible repeated inaccuracies.	Ok all the corrections have been done in the manuscript.
