

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	2013_BMRJ_7851
Title of the Manuscript:	Molecular Characterization of hepatitis B virus circulating in asymptomatic and symptomatic carrier in Côte d'Ivoire

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
In this version of the manuscript the authors followed the majority of the suggestions indicated by the first round of evaluation, improving the global quality of the paper. However, before considering the manuscript for a possible publication, further revisions should be done by the authors. In particular, there are still many spacing and English grammar errors in the whole manuscript that authors should check. Page 1 In the Abstract section, first line of Results, the sentence is not clear. Page 2 In line 6 of the Introduction section the sentence sounds not clear, i.e. the reason why authors subdivide again the HBV genotypes. In my opinion authors should simply report that 10 genotypes of HBV have been described. In lines 17-19 of the Materials and Methods section there is an English grammar error and the sentence should be correctly formulated.
