

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	2013_BMRJ_8224
Title of the Manuscript:	Improved Cultural Conditions for Methionine Accumulation in Submerged Cultivation of Bacillus cereus S8

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
It is in the interest of the quality of journal that the Reviewer raised certain valid queries about the study. Even though many aspects may be covered in an earlier paper, it would be meaningful to give the basic requisites, as it would make the Reader understand the subject of study and also the findings of study in relation to the experiments performed. However, the Journal authorities are the best to decide about the impact of the journal in the field of microbiology. Authors response to the Reviewer's comments are very discouraging to the Reviewer to make any meaningful comments, as it would mean the same and no positive thoughts coming from the Authors.
