SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	<p>1. There are too many errors in the grammar; use of spaces, periods, commas, fonts, or formats. The authors should carefully review the manuscript before sending it to a Journal.</p> <p>2. The inclusion or exclusion criteria were not shown clearly.</p> <p>3. What was the definition for statistically significant? Although the authors mentioned $p < 0.05$ was considered as significant in the methods section, $P = 0.05$ was also considered as the “significant” in the results. It indicates that the assessment for the results could be incorrect. Please make sure.</p> <p>4. I don't see any novel or unique finding in this manuscript.</p> <p>5. As mentioned above, there are too many mistakes as a scientific assessment in this manuscript. The investigator should carefully review the protocol.</p>	<p>1-Thanks a lot for your valuable notes, I will rewrite the manuscript according to your advices.</p> <p>2-I had written (. The subjects were thoroughly examined clinically to confirm the inclusion criteria. Exclusion criteria included hypertension, diabetes mellitus, coronary heart disease and other cardiac problems, renal disease. None was on any medication) , study include only healthy subjects. so I will add this sentence to be more informative.</p> <p>3-Previously, i published in this prestigious journal and they sent to me template that contained instructions, one of these instructions (<i>P</i> is always italicized and capitalized.</p> <p>i) Correct expression: ($P = .05$). Wrong Expression: ($P < .05$), unless $P < .001$.)</p> <p>4- Evaluation the changes that occur in stroke volume, cardiac output, heart rate, and blood pressure during HUT,</p>

SDI Review Form 1.6

		<p>have been studied and illustrated in details, so the present study focused on the changes that occurred in LVET and PEP during different degree of tilting in healthy subjects in our country in order to continue this study in the future with disease conditions (e.g) DM and its effect on these parameters, or in patients with history of syncopal attacks.</p> <p>5-Yes, I will work hard to improve the manuscript.</p>
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	The inclusion criteria were not shown clearly.
