SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	In randomised study the baseline characteristics should be similar between both groups. In table one there was deference in dyslipidemia and in family history. In table two there was deference in troponin levels and in TIMI risk score. The data do not support a randomization test. That always makes the conclusion difficult to state.	
<u>Minor</u> REVISION comments	In table one dyslipidemia is misspelled	
<u>Optional/General</u> comments	none
