

**SDI Review Form 1.6**

Journal Name:	<a href="#">European Journal of Medicinal Plants</a>
Manuscript Number:	2015_EJMP_16394
Title of the Manuscript:	<b>Hepatoprotective effect of Lippia multiflora aqueous extract against ethanol-induced toxicity in wistar rats</b>
Type of the Article	<b>Original Research Article</b>

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p><b>General comment:</b>The study reports the hepatoprotective effects of Lippia multiflora aqueous extract against ethanol-induced toxicity in wistar rats.The aim is clear and the experimental design is sound; besides, experiments testing the health effects of plant extracts in live animals are always necessary. Hence, this study was well-performed, well-documented and the manuscript is well prepared and arranged following the journal authors instructions. The article is full of grammatical errors, try to use quality of simple English layout. The introduction provides a clear background, define problem and propose solution. But the number 3 sentence in methodology should be the second sentence and number 2 sentence should be the third sentence. In the result sections, the tables should be in the following order; tab. 1=body weight, tab. 2=weight gain, tab.3= liver weight. Then, followed it with the other tables as stated initially. Also, do not use abbreviation on the title or sub title, e.g, Table 1: <del>ALT activities in control and treated rats</del>: Alanine aminotransferase activities in treated rats. Correct that of tab. 2, 3, 4 and 5, and do not add in control in the heading. Results are not described in a concise manner, discussion is presented clearly with detailed interpretation of data and conclusion briefly stated the major findings of the work. The reviewer recommended the manuscript for general revision, especially thorough English organization before</p>	<p>We have done the revisions accordingly int he manuscript.</p> <ul style="list-style-type: none"> <li>-Table 1: Effect of treatment on weight variation of ethanol induced hepatotoxicity in rats (page 3 , Results, line 26)</li> <li>-Table 2: Effect of treatment on weight gain (page 4 , Results, line 1)</li> <li>-Table 3: Effect of treatment on liver weight variation of ethanol induced hepatotoxicity in rats (page 4 , Results, line 4)</li> <li>-Table 4: Alanine aminotransferase activities in control and treated rats (page 4 , Results, line 1)</li> <li>-Table 5: Aspartate aminotransferase activities in treated rats (page 5 , Results, line 9)</li> <li>-Table 6: Gamma-glutamyltransferase activities in treated rats (page 6 , Results, line 1)</li> <li>- Table 7: Triglycerides levels in treated rats (page 6 , Results, line 9)</li> <li>- Table 8: C Reactive Protein levels in treated rats (page 7 , Results, line 1)</li> </ul>
