

SDI FINAL EVALUATION FORM 1.1

PART A:

Journal Name:	International STD Research & Reviews
Manuscript Number:	MS: 2012/ISRR/1897
Title of the Manuscript:	PREVALENCE OF DIABETES MELLITUS, HYPERTENSION AND LIPODYSTROPHY IN HAART RECEIVING HIV PATIENTS IN SOUTHERN ETHIOPIA.

PART B:

	FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
For comments of Reviewer AT and author's feed back	The authors have responded adequately to most of the issues. A few additional comments are listed below: Some of the language is awkward and/or non-grammatical. More comment editorial review would be appropriate. Using a single glucose measurement to diagnose DM may also have overestimated the incidence of DM. This limitation is not acknowledged.	

PART C: Recommendation: The authors have adequately responded to almost all the issues. The comments above can be easily addressed. With these final changes, I would support acceptance of the manuscript.
