

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International STD Research & Reviews
Manuscript Number:	2014_I-SRR_8918
Title of the Manuscript:	Risky Sexual behaviours and Associated Factors among People with Disabilities in Dessie City, Northeast Ethiopia

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
P values should be omitted in the abstract; and besides, author must report OR (95%CI) Information about number of participants is repeated in the method and results. Delete it from method. Mean of some variables (for instance, age) must report with standard deviation.	I put the p-value in the abstract instead of OR and confidence interval just to obey to the comments given from the other reviewers. The correction was done in the manuscript. The information regarding the number of participants in the method section was deleted still it was did because of the comment given from the reviewers, now it was corrected and supplemented in the article. I don't believe the mean of every continuous variable such as age need to be supplemented with standard deviation. It only mentioned when it is important for the manuscript.
