

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	MS: 2012/IJBcRR/2593
Title of the Manuscript:	Chronological primacy of oxidative-induced neuronal damage in the pathogenesis of Alzheimer's disease.

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The review is acceptable for publication with the following minor comments. 1) Conclusion should be at the end of the manuscript (not in the abstract), with a heading: Conclusions and Outlook. 2) page 13: an Al superoxide semi-reduced radical ion (AlO_2^{*2-}): should be: Al(III)-superoxide radical anion complex (or Al-superoxide complex). 3) The major draw-back that has not been corrected in the manuscript is that there are several short paragraphs (some of them are copied below), one for each reference. They should combine the relevant paragraphs and focus on the major points of the review rather than repeating “---reported---”. It is perhaps good to add subheadings to address this.
