Subject: RE: Request for final decision for manuscript number 2012 IJBcRR 2247

after carefully reviewing of the manuscript no- 2012 IJBcRR 2247, I consider it suitable for publication. However, the following comments should be considered for authors:

In Abstract: It is not necessary to include all the values for each chemical parameter evaluated, so I suggest to include only their range.

Please note that DE values from GB and GD and, according with the information included in the manuscript by the authors, are out of SON's specifications. Please, review it not only in abstract

but also throughout the different sections of the manuscript.

In Introduction: L2 "*oligosaccharides*" instead of "oligosaccharide"

L3 "*in a wide variety of fruits*" instead of "wide variety of fruits"

Table 3. How many independent and/or technical replicates were carried out for each sample?
Please, include such information as a table footnote . In addition, please indicate if data are mean $\pm$ SD.

Editor's Details:

Dr. Alfonso Clemente
