SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	The article is sound in its scientific content, objective, methodology and discussion. The conclusion iron chelating agent could be used to improve insulin action may be true for experimental animals. Extrapolating to human condition may require more studies.	I wish to appreciate the reviewer's comment and observations and to admit also that we intend to design more work that will throw more light on the above subject in line with reviewer's comment and suggestion. However, the conclusion has been modified a little as a result of the reviewer's comment and suggestion.(see line 242)
<u>Optional/General</u> comments		Material and method I wish to let you know that slight modification was done although not part of reviewer's comments. I added nicotinamide (NA) on page 2 line 58. There was also a little modification on the title of table 1 (see line 160). Footnote was included for table 1 (line 178) and table 2 (line 187). This is for your notification. Thank you
