**PART 1: Review Comments**

|                                            | Reviewer's comment                                                                                              | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><u>Compulsory</u></b> REVISION comments | In conclusion part I recommend to emphasize the most relevant phytochemicals responsible for the healing effect | The phytochemicals like Phytol, 2-Piperidinone, N-[4-bromo-n-butyl]-, 9,12,15-Octadecatrienoic acid, methyl ester, (Z,Z,Z)-, Pseudoephedrine, (+)-, Diazoprosterone and 6,9,12-Octadecatrienoic acid, phenyl methyl ester, (Z,Z,Z)- may be responsible for the healing activity due to their astringent and antimicrobial property. Twelve major phytochemicals were observed in this study by GC-MS have antimicrobial activity as per Duke's phytochemical and ethnobotanical database. These points are clearly mentioned in the discussion part. |
| <b><u>Minor</u></b> REVISION comments      | Please check the nomenclature of chemical compounds                                                             | We checked the nomenclature of chemical compounds as per your comments and corrected a few mistakes there.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b><u>Optional/General</u></b> comments    |                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
