

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	2014_IJBcRR_13188
Title of the Manuscript:	Characterization of Dipeptidyl Peptidase IV Enzyme Activity in Serum of the Komodo Dragon (Varanus komodoensis)

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I have gone through the author's comments and the revised manuscript. The manuscript can be accepted for publication as the author has addressed one of the points raised. According to my perspective, we generally never cite references in the Conclusion section of a research paper. That is why I had highlighted it.	I'm really not sure what I am supposed to do here. The IJBcRR Instructions to Authors says nothing about not including references in the Conclusions section. Therefore, this should be fine. The comment to the left seems to be a mere suggestion, based on history: "we generally never cite references in the Conclusion section of a research paper". This is not a strong statement. In addition, just because you haven't done it before, doesn't mean that the references can't be included now. Is this a demand that we take the references out? Am I supposed to rewrite the Conclusions section to eliminate the references? This would also eliminate an important part of this section. I would like to request that the editorial staff accept the manuscript with these references, because they support a significant part of the discussion section.
