

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	2014_IJBcRR_13433
Title of the Manuscript:	Contraceptive Effect of Ethanol Extract of <i>Dioscorea villosa</i> Tuber on Reproductive Hormones of Female Wistar Rats

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I understand all the justification points presented by the author. However, I still can't find the relevancy of FSD and its categories to the research main point, therefore I still request the omitting of this part and focusing on the main point (lines: 35-53)	That the extract caused alterations in female reproductive hormones (hormonal imbalance) which would have adverse effect on follicle maturation, ovulation, fertility and conception/pregnancy indicates that there is Female Sexual Dysfunction (FSD) as well as its categories and subcategories. "FSD is defined as a condition in which there are alterations in the processes involved in the female sexual response cycle or by pain associated with sexual intercourse". This goes to mean that it is relevant to the main point of the study. Therefore, the authors again, crave your indulgence to let it remain.
