

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	2013_IJBcRR_8617
Title of the Manuscript:	Mini-review: Respiratory and pH imbalance at the early precancerous stage

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Final version of the manuscript is good and may be accepted. All remarks were being taking into account, some positions were changed. At the same time I would like to make one comment: The explanation of author to reviewer in accordance with his comments (points 1), page 18, line 508 and point 2), page 18, lines 512-515) is not be fully accepted. Mentioned positions have not been correctly explained by the author. Yes, author is biochemist, but it is not a reason to try to modify the classic pathophysiological conception. It is good, that these explanations were not included into the text of the new version of paper.	Thank you very much for the pertinent suggestions and instructive discussions. I have learnt much from the reviewers' experience and practice. Indeed, I respect now the classic pathophysiological conception and I am sorry because I was a bit superficial with the definitions. I won't repeat that and I will be more attentively. Of course, these explanations were not included into the text of the new version of paper, as showed by the Reviewer.
