

Editor's Comment :

Now the manuscript can be published.

However, the authors still were not attentive enough and did NOT correct a few misprints which I mentioned (they are listed below).

Misprints not yet corrected by the authors in revision No. 3
(repeated here, with line numbers in brackets):

(45, 48) correct: "enter aquatic" (in such cases, do NOT use "to" (or "in") after "enter!").

(74) each per group (correct: "per each group"; I wrote that there were 2 cases of this misprint; only ONE was corrected).

The same for:

(74-75) Correct: "free from any pesticide" (I wrote that there were 2 cases of this misprint; only ONE was corrected!).

Authors' Feedback:-

Please find in the manuscript, the corrections required in lines (45 and 48). However, in the previous revision, the required correction was "enter to aquatic"

(45) enter aquatic

(48) enter aquatic

The correction required in line 74, was realized

(74) male aquariums, were divided into three groups with three replicates per each group.

The correction required in lines 71 and 75 were performed.

(71) The first group was free from any pesticide and maintained as a control female group.

(75) The first group was free form any pesticide and maintained as a control male group.
