

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	2014_IJBcRR_11718
Title of the Manuscript:	Age-Dependent Effect of Cyclic Feeding Regimen on The Level of Serum Apolipoproteins in Young and Old Rats

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I have thoroughly studied the version 2 of a research article entitled as,"age-dependent effect of cyclic feeding regimen on the level of serum apolipoproteins in young and old rats". The authors of the presenting article corrected all the minor corrections and described some justification about the major revision. Although, the work described in the manuscript warrant its publication in the journal, but I am little bit unsatisfied about the gel presentations to discuss the findings at protein level. In future, if someone consult this article as a reference study, especially from the developed world, some serious questions may arise about the validity of the protein findings. Well, if the administrating authority of the journal and the concerned authors of this study are mutually agreed that enough and justified explanation can be presented to the queries by the corresponding authors about gel presentation then I have no objection on this issue. Overall, the research is valid, authentic and permit to be published in the corresponding journal.
