

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	2014_IJBcRR_15784
Title of the Manuscript:	Kinetics For The Inhibition of Serum Acetylthiocholin Esterase Activity by Some New Phenobarbital Derivatives.
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Authors have poorly addressed reviewer comments. When I mean that data is poorly presented I am not concerned about the general aspect of the graphs and tables, this is a matter of style. It is important to provide a better clarification of the actual results, including the statistical analysis IN the graphs and tables, in order to provide an improved understanding and interpretation of results by the readers. For instance, all figures and tables lack standard deviation (or standard error). There is not attention to the statistical analysis in the figures and tables. This makes me feel that results are based on single experiments, without proper repetitions and further statistical analysis.	Thanks for all thinks. I aim to learn and to have a big advantage for my future research. The direct of my work is to study the effect of some prepared compound in AChE enzyme and these was based on many researches that I read it which tend to present there work in same way in addition I published more than paper in same manner in your journal , Indian and Arabian journal. How ever your comment relay was very useful to me and to learn it to my students. I add the statically analysis to the work I am in your side its important to understand the results and wholly paper .
