

Editorial Comment:

Final Decision Report

Effects of macro- and nano-cobalt oxide particles on barley seedlings and remediation of cobalt chloride toxicity using sodium hypochlorite

Ref. 2013_IJPSS_8206

The text has now been improved considerably. However, several suggestions were misunderstood and were not corrected such as the space after hyphen when a word follows, while some other mistakes were introduced, but they all are trivial.

I am glad that the author adopted one of the titles I had suggested. Now it reflects satisfactorily the content.

Final suggestion

Accepted, provided all new corrections are adopted: just accept changes made on the manuscript.

It is not necessary to see again the manuscript.
