

SDI Review Form 1.6

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	2013_IJPSS_6883
Title of the Manuscript:	An integrated soil fertility management decision support tool for coffee: model structure and calibration for Northern Tanzania
Type of the Article	RESEARCH PAPER

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	There is not much revision required in the manuscript except a few Points which have been highlighted in the text and given as comments therein.	
<u>Minor</u> REVISION comments	Very minor revision is required but since there are many short forms used in the text, it is desirable if the authors could give there details in the appendix or as foot note in the tables. This will make it easier for the reader to understand the model.	
<u>Optional/General</u> comments	This is a very good paper where SAFERNAC Mechanistic model, has been proposed as a tool in quantitative land evaluation and for making decisions regarding integrated soil fertility management (ISFM) specially in regions of nutrient limited non-shaded coffee plantations. I am sure this model can be adopted n any region (ISFM) under similar set of parameters.
